## Exhaust Dampers

Gellert's Ruskin® Backdraft Exhaust Dampers are gravity operated and open with air flow and pressure. Backdraft design prevents air from entering the building through the Exhaust Dampers. Damper blades are constructed from .050" thick extruded aluminum with extruded vinyl blade edge seals and are mounted in an aluminum frame with synthetic bearings. Gellert's Ruskin® Backdraft Exhaust Dampers provide high performance with minimal maintenance to guarantee a long operational life.

Gellert's Total\*E\*Clips material insures light reduction through the Exhaust Dampers while offering a low resistance to air flow. Constructed from lightweight ultraviolet resistant PVC, this material will not corrode and is very simple to install.

The Gellert Company is a name synonymous with quality equipment and innovative design for raw product storage systems. Since 1964, The Gellert Company has provided the most advanced Ventilation, Humidification, Refrigeration and Control equipment with an emphasis on efficiency, economy, dependability and fully Certified system performance. The Gellert Company is the industry leader in sales and service of agricultural climate control systems and continues to be first in balanced system design, first in equipment quality, and first in system performance. From potatoes, to onions, to grain, and everything in between... think Gellert.
